**Subject:** Frac Tank disposal from Bachman Services fire  
**Date:** 08/14/2012 11:32 AM

---

All,

Raymond Melton called me this morning and let me know that Carla Hayes, from Bachman Services informed him that Bachman will begin disposing water from frac tanks today. They will be hauling the water to Southwest Landfill which is located on Council Road and bulking the water in a drying bed. They believe that they can take approximately 200,000 gallons per day which will empty approximately 10 frac tanks/day and with 151 frac tanks on site will be completed in a little over 2 weeks.

Thanks!
